# Is Your Team Struggling With This?

## Scattered Data

Projects live in emails, spreadsheets, and chat threads with no single source of truth.

## Zero Visibility

Leadership has no real-time view into project health, risks, or resource utilization.

## Missed Deadlines

Tasks fall through the cracks without clear ownership, milestones, or escalation workflows.

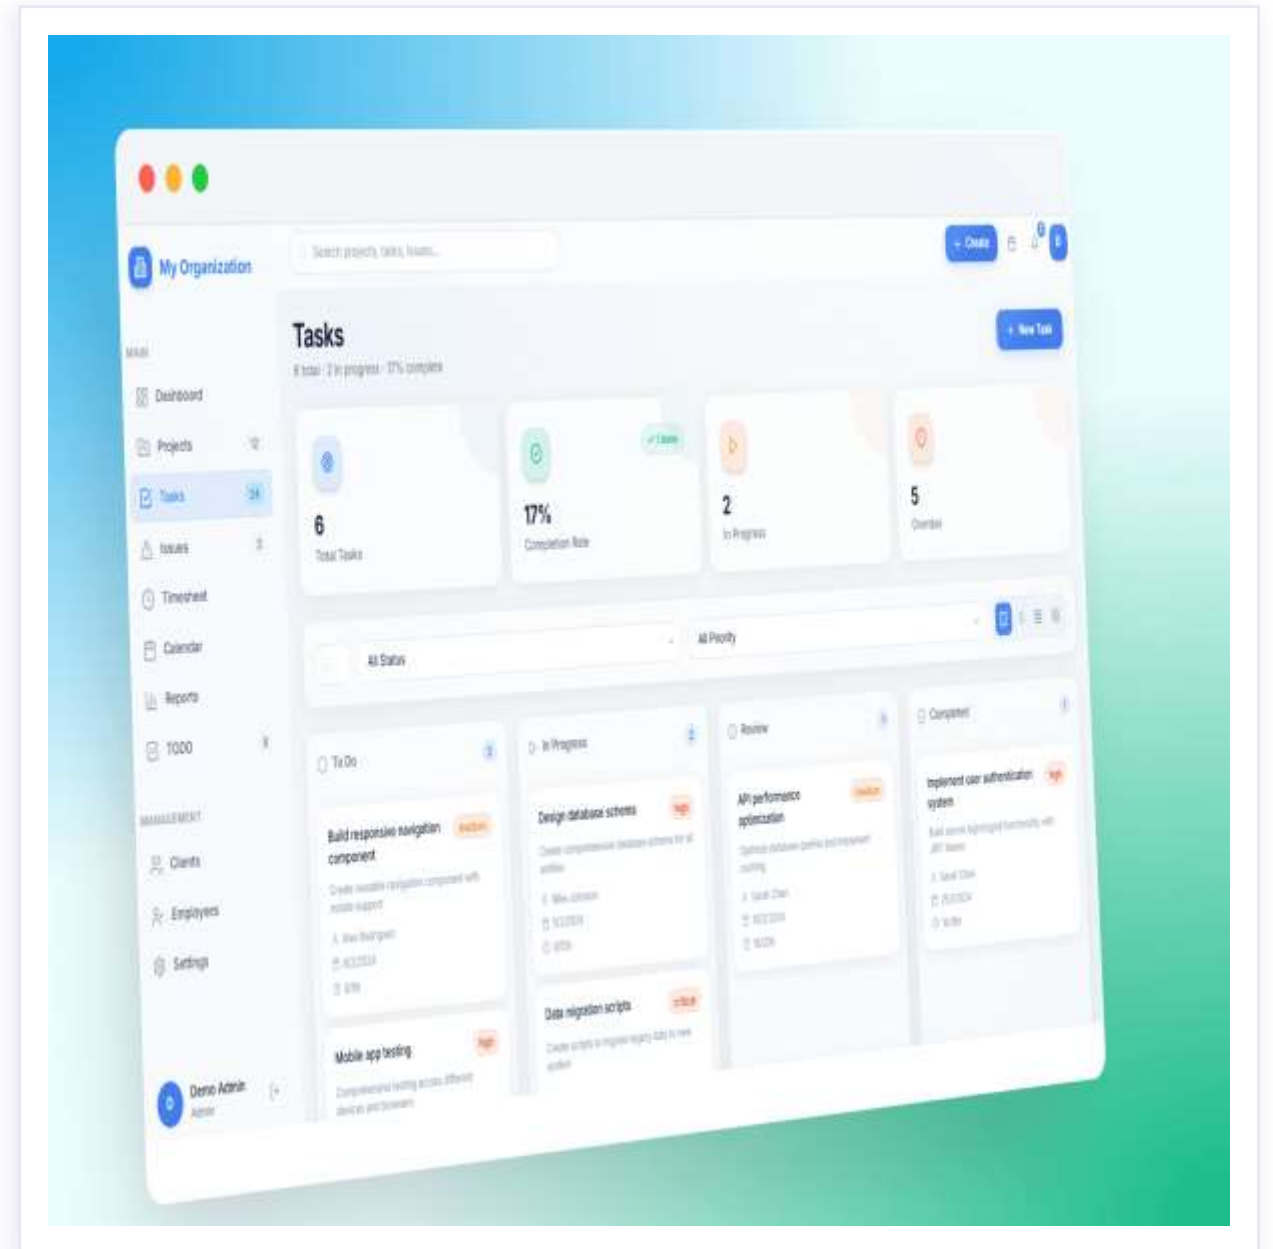

## Security Gaps

Sensitive project data shared without role-based controls or audit trails.

# One Portal. Complete Control.

Our SharePoint-based Project Management Portal centralizes your entire PMO giving every stakeholder complete visibility, from task boards to executive dashboards.

- ❖ Built on Microsoft SharePoint secure, scalable & compliant
- ❖ Real-time dashboards with KPIs, milestones & project health
- ❖ Kanban boards, Gantt charts, and smart task assignment
- ❖ Integrates with Microsoft 365, Teams, and Azure AD

# Everything You Need to Deliver Projects

## PMO Dashboard

Live dashboard with active vs. completed projects, KPIs, milestones and real-time project health across your entire organization.

## Task & Milestone Tracking

Assign tasks, set deadlines, define milestones, and visualize workloads with Kanban boards, Gantt charts, and list views.

## Document Management

Centralized libraries with version control, co-authoring, and permission-based access so teams always use the latest files.

## Risk & Issue Register

Track risks, issues, and change requests with custom fields for probability, impact, and mitigation. Escalation workflows included.

## Resource Management

Plan and monitor team capacity, resource allocation, and availability. Prevent burnout with workload overviews.

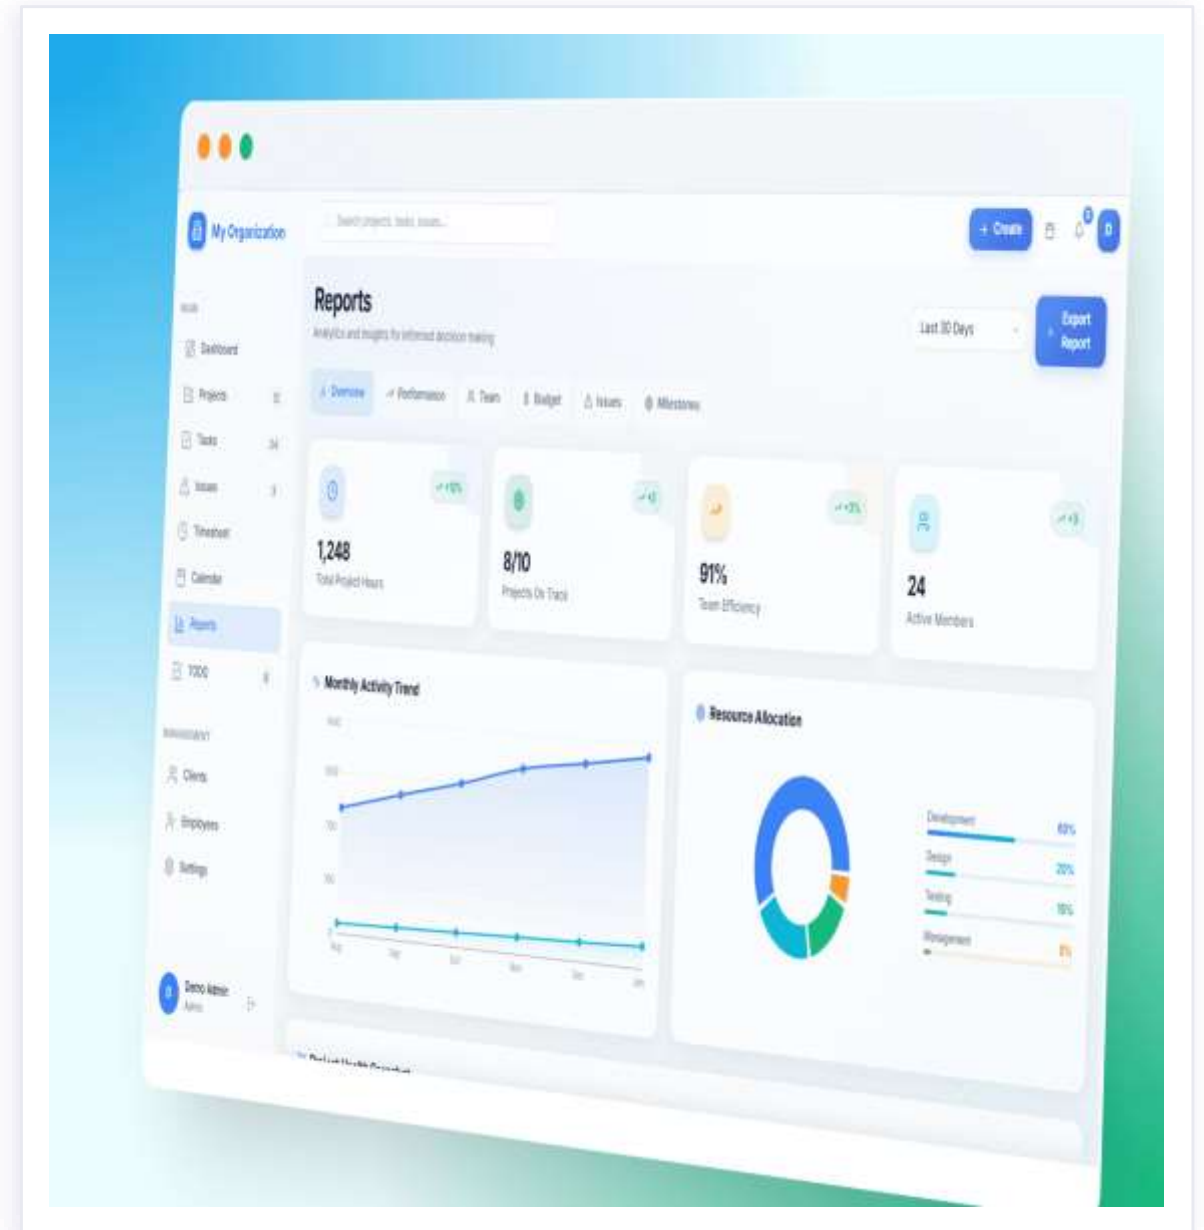

## Role-Based Security

Granular permission controls integrated with Azure Active Directory ensuring only the right people access sensitive data.
